

“Low CEC Special”

0-0-28 with 5% Mg, 3% Mn & 3% Fe, Plus .1% Zn & Cu
For use on Bermuda or bentgrass greens, tees and athletic fields

“Low CEC Special” 0-0-28 with secondary and minor nutrients is:

A high quality fertilizer formulated for low CEC, sand-based growing mediums that require a unique fertilizer with higher amounts of the traditional nutrients most needed based on soil test history.

Product is especially designed for growing areas where nutrients easily leach and often need significant monthly replenishment due to frequent irrigation, rainfall or a high sodium environment. Low CEC Special is a soluble formulation that includes high percentages of Potassium, Magnesium, Manganese and Iron, along with trace amounts of Zinc & Copper and is designed for application to VERY low cut turf.

- *Additional options include:
- 0-0-30 w/2% Fe + Micros
 - 0-0-45 w/4 month residual

Features and Benefits:

For use on Bermuda or bentgrass greens, tees and athletic fields

- Research proven stress reducing benefits associated with the use of Potassium and Manganese include less disease incidence and improved drought & heat tolerance
- Research also shows increased root density when Potassium and Manganese are applied routinely
- Increased color response without growth from plentiful levels of Mg, Fe, Mn
- Suggested use at 4-8 week intervals when small particle size provides uniform nutrient replenishment at significant application rates
- When spoon feeding Nitrogen with foliar apps, this granular product can be used to provide the higher Potassium, Magnesium and Manganese required to keep these nutrients in optimum turf grass ranges
- 100 SGN soluble particle disappears with minimal watering

Nutrient story:

- 100% of K: Readily available Potassium Sulfate
- 100% of Mn: Manganese oxide chemically treated to be in a more available form
- 100% of Fe: Iron oxide chemically treated to be in a more available form
- 100% of Mg: Magnesium oxide chemically treated to be in a more available form

Composition: Fine particle blend **Uniformity Index 45+** **SGN: 100**

Labeled Rate for Cool & Warm Season Turf:

Label Rate	Product/M	K/M	Coverage (M)
Light	2.0	0.56	25
Normal	3.0	0.74	16.7
Heavy	4.0	1.12	12.5

NOTE: Irrigate for 5 to 10 minutes following application, and especially if temperatures are expected to exceed 80° F, or when foliage is moist with dew.

Packaging: 50 lb. bag; one bag covers 12,500 sq. ft. at the heavy rate
