

Specialty Greens Fertilizers for Aerification

Select one of following ammonium sulfate containing fertilizers for quick turf recovery at or a week before aerification.

- 17-3-17 Contec (ammonium sulfate + methylene urea) w/Fe & Mn
- 13-2-13 (100% ammonium sulfate) w/ 3% Fe & minors

Product/M	Nutrients/M
2-4 lbs/M	.34-.70 lb N/M
2-4 lbs/M	.25-.50 lb N/M

After aerification, apply slow release coated K for sand based greens.

- 0-0-45 Super K Greens w/100% polymer coated K sulfate (slow release K)

Work this product into greens canopy and aerifier holes while dragging sand topdressing.

Product/M	Nutrients/M
5 lbs/M	2.25 lbs K/M

After dragging topdressing, apply A-TEP Hi Mag micronutrients.

- ATEP micronutrients (esp on dwarf + ultradwarf bermuda)

Product/M	Nutrients/M
2.5 lbs/M	-

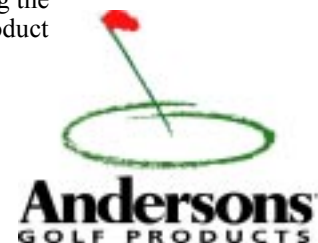

Two weeks after aerification, apply one of the following SGN 80-100 greens fertilizers:

- 9-18-18 Contec w/ Ca & Mg
- 17-3-17 Contec w/ Fe & Mn
- 18-9-18 Contec w/ Fe & Mn
- 13-2-13 (100% ammonium sulfate) w/ 3% Fe & minors
- 10-20-20 with 50% Nutralene

Product/M	Nutrients/M
3-5 lbs/M	.25-.50 lb N/M
2-4 lbs/M	.34-.70 lb N/M
2-4 lbs/M	.35-.75 lb N/M
2-4 lbs/M	.25-.50 lb N/M
3-5 lbs/M	.30-.50 lb N/M

Listed below are the highlights and considerations used in developing your fertilizer selection for greens. These products are all small particle (SGN 80-100) specified for finely managed greens.

- **Contec® Super Greens 17-3-17 w/ Fe & Mn** (homogenous) provides a high rate of potassium and controlled release Contec® nitrogen (four N sources for staged N response) along with higher Mn for correcting soil deficiencies.
- **0-0-45 Super K Greens** supplies high rate of slow release potassium and sufficient sulfur to correct deficiencies and maintain soil levels for 2-3 months on sand based greens.
- **12-2-12 Natural Base with Minors** is a fortified blend of various plant & animal meals that are a balance of proteins, fats, sugars, starches and carbohydrates. It has also been formulated with Nutralene to extend the feeding and continue to provide plant nutrients for better turfgrass growth. Can be substituted for above products if Natural organic N source is preferred.
- **Contec® 18-9-18** (homogenous) featuring Contec® nitrogen delivers a substantial amount of readily available potassium & MAP to increase turf resistance to stress. It also features a minors package of Fe & Mn.
- **ATEP HI Mag** contains a high % of immediately available as well as slowly available micronutrients essential in correcting deficiencies commonly found on sand-based greens. 11% Mg, 8% Fe, 3% Mn, 1% Zn & 0.5% Cu.
- **Contec® 9-18-18** (homogenous) is a specialty Contec® fertilizer designed for promoting the rapid and vigorous development of newly seeded, aerified, or sodded turf areas. This product is derived from MAP a readily available P source and also provides 4% Ca & 2% Mg.
- **13-2-13 w/3% Fe & minors** provides a 100% ammonium sulfate based N source with high rate of potassium and a minors package. This 100 SGN product provides 100% quick release N, and with extended use can benefit high pH sand based greens.
- **10-20-20** is a specialty fertilizer designed for promoting the rapid and vigorous development of newly seeded, aerified, or sodded turf areas. This product is derived from MAP a readily available P source and also has 50% Nutralene.
