

“Ultradwarf Special”

8-0-16 with 5%Mn+2%Fe

“Ultradwarf Special” 8-0-16 with Manganese and Iron is:
 A high quality golf course greens fertilizer specially formulated for low CEC growing mediums. 100% of the nitrogen is provided in a soluble form along with high rates of manganese and iron. Low rates of nitrogen and high rates of potassium can be applied to VERY low cut turf, with an easy-to-use granular product.

Features and Benefits:

- Designed for use on bermuda or bentgrass greens, tees and athletic fields
- Ammonium sulfate based nitrogen provides lower soil pH with IPM benefits
- Research supports stress reducing benefits of Manganese esp. on low CEC sand mediums
- 100 SGN small particle disappears with minimal watering
- Reduces incidence of Bermuda decline and related patch type diseases on most turf species
- For use at light rates at 1-3 week intervals where small particle size provides a uniform response without creating excessive matt and thatch commonly associated with ultradwarf turf

The Nutrient story:

100% of N: Immediately available as ammoniacal N
 100% of K: Readily available as potassium sulfate
 100% of Mn: Manganese oxide, treated to be in a more available form
 100% of Fe: Iron oxide, treated to be in a more available form
 Ultradwarf Special 8-0-16 contains 5% manganese and 2% iron for added color response

Composition: Fine Particle Blend **Uniformity Index:** 45+ **SGN:** 100

Application Rates:

LABEL RATE	PRODUCT/M	N/M	K/M
Low	2.0 lbs	0.16	0.32
Medium	3.0 lbs	0.24	0.48
High	4.0 lbs	0.32	0.64
Heavy*	6.0 lbs	0.48	0.96

NOTES:

- Irrigate immediately following application for 10 to 15 minutes.
- *Heavy rate is only recommended on bermudagrass turf. Apply only if temperatures are below 85°.

Packaging:

50 lb. bag; one bag covers 16,600 sq ft @ the medium rate.

Product Positioning:

- General purpose, 1:2 ratio greens grade fertilizer with high rate of manganese and iron.
- Ammonium sulfate helps suppress diseases like Take-All patch, Summer Patch and Dollar Spot.
- Can be used as a granular applied substitute for liquid applied “spoon feeding” programs.
