

# Introducing Blended SGN 150 Fertilizers with **Extend**<sup>™</sup> Nitrogen Technology

*Provides season-long  
nitrogen release!*

Extend is The Andersons' patented polymer-coated urea technology that provides uniform nutrient release over an extended period of time.

It delivers a metered release of nitrogen to adequately maintain uniform turf greening and desired turf quality for 12 weeks or more.

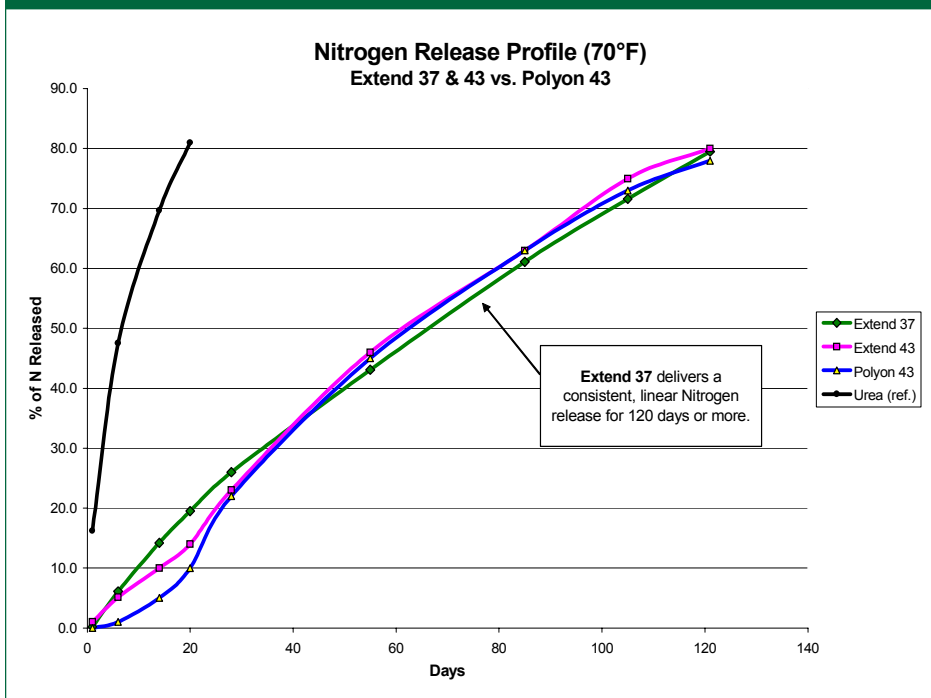

The unique diffusion release characteristics of Extend and low temperature sensitivity provide high nutrient efficiency and prevent leaching, even during excessive precipitation.

**This exclusive Extend technology provides these proven benefits:**

- Prolonged, consistent nitrogen release at sufficient rates to provide uniform turf growth
- Predictable performance, even with changes in temperature or season of use
- High nitrogen efficiency with little nitrogen loss
- Resistance to leaching due to excessive rainfall
- Excellent coating durability, minimal surge growth with fewer clippings

The chart below shows the release curve advantage of Andersons SGN 150 fertilizers with Extend:

Release information is based on analytical data from laboratory and field trial research.

**Blended SGN 150  
Fertilizers with Extend:**

28-3-10 75% Extend, 1% Fe, 0.5% Mn

20-0-20 75% Extend, 25% Poly-S<sup>®</sup>, 2% Fe, 0.5% Mn
